MATERIAL AND FINISHES

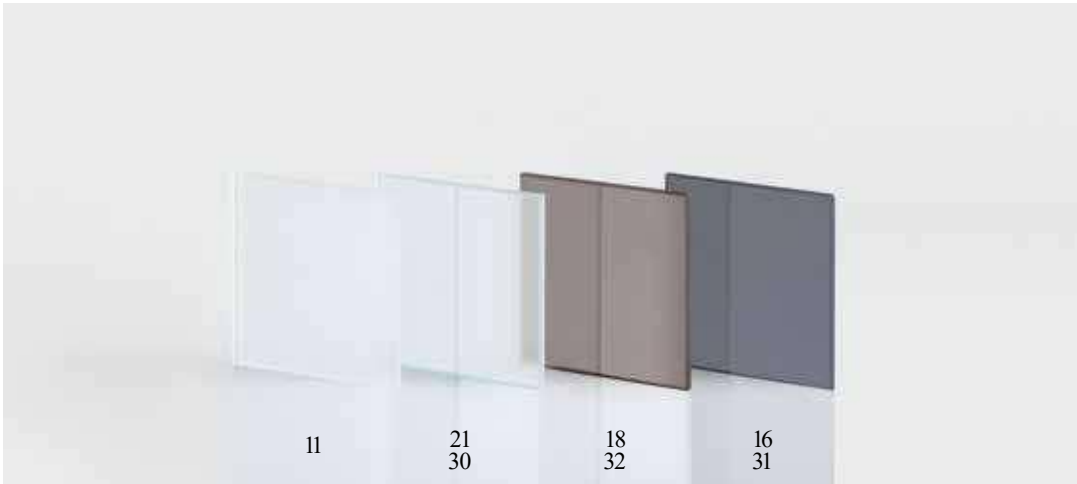

The ability of SOLOGAL systems to harmonize and create connections with the architectural environment and interior design is also due to the wide range of materials and finishes available, such as anodized aluminium frames in eight different colours, three types of oak wood cladding, any RAL colours, transparent, etched, relex, glossy and satin back-painted glass, mirrors, textured glass, laminated with mesh or fabric, panels covered in fabric of various colours that guarantee an almost unlimited number of combinations and the possibility of creating chromatic and material counterpoints with the other elements of the house.
